**Business Continuity Plan / Business Impact Assessment
Disaster Recovery Plan**

Predicting when the worst will happen is impossible but having a plan in place for that eventuality can save money and reputation. Knowing what the impacts will be will allow businesses to add additional security to mission critical areas before there is an emergency.

Remote User Support (24/7 Monitoring and Management with Systems Patching)

Remote monitoring and management solutions efficiently secure, maintain, and improve clients' IT systems, all from a dashboard that highlights issues, so techs know where to focus their time to maximize security.

\$12.00

Per Node Monthly
Price includes labor.

Email filtering/Monitoring

VENZA MSP offers customers inbound and outbound email protection against spam, malware, ransomware, phishing, and other email-borne attacks. Again, this added layer of protection at the property level can mean the difference between business as usual or extended downtime to fix infected systems, costing a hotel money and damage to its reputation.

\$3.15

Per Node Monthly

Advanced malware/Endpoint Protection

Next-gen endpoint protection does not rely only on a store of antivirus signatures or signature-based technology to combat malware. It's a system of security tools that keeps learning about malware (via various techniques and vectors) and countering them in real-time rather than reacting once the damage has already been done. Having this intelligence in place helps MSPs to protect hotels from ever-changing threats—and also helps them to recover quickly when ransomware or other exploits occur.

\$5.10

Per Node Monthly

Honorable Mention:

Bigger Firewalls - with MFA (multi-factor authentication)
VPN (virtual private network) capabilities.
