

CORONAVIRUS : REMOTE WORKER SECURITY

HOME NETWORK

- Change all default settings on router
- Use wired instead of wireless when possible
- Use a separate home vs work segment when possible
- Limit who knows your wifi password

PASSWORDS

- Use strong administrator passwords on network equipment
- Use strong passwords / passphrases on each account
- Use a password manager to “remember” passwords
- Use 2FA / MFA on all accounts

UPDATES

- Update all devices to include routers, laptops, mobile, etc.
- Update antivirus / malware signatures and applications
- Update all applications to including operating system and firmware

FAMILY, ROOMMATES AND GUESTS

- Make all equipment off limits to family and friends
- Set up a separate, sound proof work space if possible (working with PCI, PII and sensitive data)

PHISHING

- Spotting Phishing Emails
